TITLE : FACSIMILE EQUIPMENT

ABSTRACT : PROBLEM TO BE SOLVED: To recognize a transmission result by an electronic mail not through a facsimile equipment by transmitting a stored routine sentence to the destination on a network specified by a set mail address corresponding to the result of facsimile transmission.

SOLUTION: By pressing a start key, a communication control part 408 starts a facsimile transmission sub routine and performs transmission to the number set in advance. After the transmission is ended, whether or not it is normally ended is checked and a transmission completion report or a transmission error report is transmitted by the electronic mail corresponding to the result. The reports of the transmission result are transmitted to the mail address set in advance through a network interface 414. Then, the reporting destination of a facsimile communication result is turned to the mail address displayed at an LCD at the time of pressing the start key. At this time, when the mail address is not set at the time of pressing the start key, the transmission result is not reported by the electronic mail.
